

Instruction.

1.Hunting

Before start we need to setup settings.

From list marked [1] select monster what you want attack

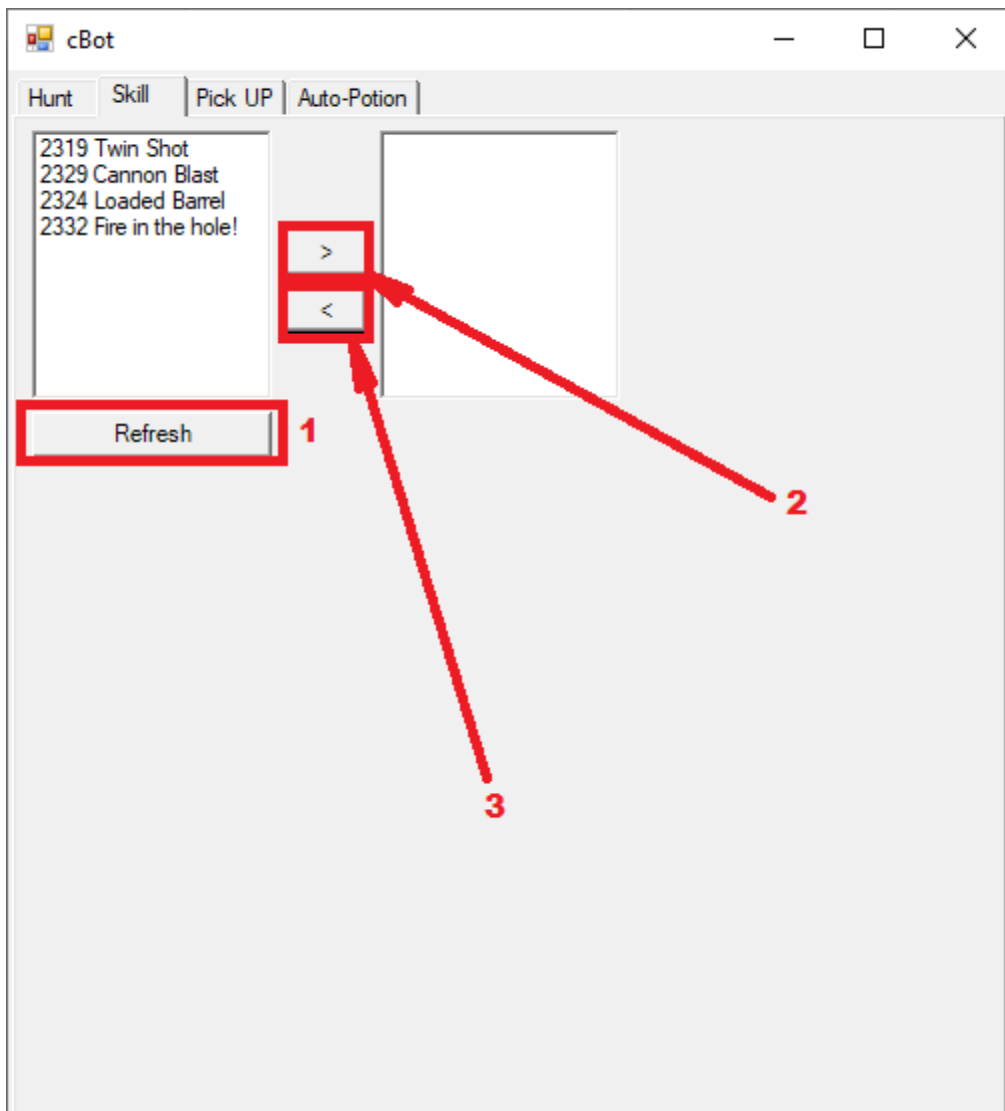

To search them faster you can use, "Search monster" textbox.

if you want to exp in stricted area check box [2], and when you will reach this area click set[3].
Button will fill X,Y,Z fields. To change exp radius use field [4].

2. Skills

Next step will be setting skills.

At the beginning skill list is empty, so we have to click Refresh button [1], after that all our skills will appear on list(some of them can be unknow because lack of configs). Select skill what you want use then click [2] button, to remove skill from use skill list click on that skill and use [3]

button.

3. Pick up

I wont cover this, because bot pick up everything, this section will appear when i add filter.

4. Auto Potions

The screenshot shows the 'cBot' application window with the 'Auto-Potion' tab selected. The window contains several input fields and a checkbox, with blue boxes and numbers highlighting specific areas:

- 1**: Points to the 'Hp %' and 'Mp %' input fields, which are currently set to '50'.
- 2**: Points to the dropdown menus next to the 'Hp %' and 'Mp %' fields.
- 3**: Points to the 'Duration' input fields, which are currently set to '15'.
- 4**: Points to the 'Enable Auto-potion' checkbox, which is currently unchecked.

In textbox marked as [1] you can set % of hp/mp when you want to potion be used.

clicking on combobox [2] we will drop down list where we have to select item with one we will use to heal. Durration [3] is how long potion work from use in seconds. Checkbox [4] will enable or disable auto-potion function.
